

## The business climate isn't the only one we're focused on.

At SPG, we believe that being a successful business means being a good corporate citizen. To that end, SPG has put into place an array of practices and programs that reflect our role as a steward of the environment. We are working to be the industry leader in:

- Conservation & Sustainability
- Recycling
- Energy Efficiency

### Every day, in every facility, you will find this commitment to the environment at work.

To promote **conservation and sustainability**, SPG is:

- Replacing traditional plastic shrink-wrap with recycled paper packaging
- Partnering with customers on value engineering and kit packing programs that cut waste and consolidate shipments
- Using stainless steel scrap to create welding rods
- Reclaiming paint powder to minimize waste

To eliminate waste, SPG is **recycling**:

- Scrap metal
- Packaging and scrap cartons
- Lumber
- Paper and printer ink cartridges
- Steel skids and wood pallets

To drive **energy efficiency**, SPG is:

- Installing high-efficiency lighting systems
- Investing in new, highly fuel efficient forklifts

All of this is part of an ongoing commitment to our customers, our employees, our community, our nation, and the world in which we all live. The initiatives listed here are only the beginning. We are dedicated to working closely with our customers, suppliers, and business partners to develop and employ the best sustainability practices possible.
